Supporting Data:

Density

Test Substance

Identity: Diethylaluminum chloride CAS# 96-10-6

Method

Method/guideline followed: ICS-115 The density of a metal alkyl is necessary when calculating weights of additions to a process where the additions were made in volume increments. The density of a metal alkyl is measured using a calibrated pycnometer into which a weighed amount of alkyl is added. The pycnometer is then placed in a constant temperature bath and the volume of the weighed sample is determined. The density of the alkyl is temperature dependent and is reported as a value at a specific temperature.

GLP (Y/N): N

Year (study performed):

Results

Density value (°C): 0.961 g/mL @25C

Conclusions

Density for triethyl aluminum is 0.961 g/mL @25C.

Melting Point

Test Substance

Identity: Diethylaluminum chloride CAS# 96-10-6

Method

Method/guideline followed: ICS-115 Approximately fifteen milliliters of alkyl is transferred into a glass apparatus and placed within an acetone/dry ice bath. As the mixture is agitated, the alkyl solution is allowed to super-cool. The data points collected are recorded onto a diskette using MS DOS Ertco-Hart. The file is converted into an Excel graph to determine the exact freezing point.

GLP (Y/N): N

Year (study performed):

Results

Melting point value (°C): -85C

Conclusions

Melting point for diethylaluminum chloride is –85C**.**
